How to develop a sustainable telemedicine service? A Pediatric Telecardiology Service 20 years on - an exploratory study

Mélanie Raimundo Maia^{1*}, Eduardo Castela², António Pires² and Luis Velez Lapão¹

Abstract

Background: Telemedicine services are promoting more access to healthcare. Portugal was an early adopter of telemedicine to overcome both its geographical barriers and the shortage of healthcare professionals. The Pediatric Cardiology Service (PCS) at Coimbra University Hospital Centre (CHUC) has been using telemedicine to increase access and coverage since 1998. Their Pediatric Telecardiology Service has been daily connecting CHUC with 13 other Portuguese national hospitals, and regularly connecting with Portuguese-speaking African countries, through a teleconsultation platform.

Methods: This study aims at exploring the Pediatric Telecardiology Service's evolution, through a comprehensive assessment of the PCS's development, evolution and impact in public health, to better understand the critical factors for implementation and sustainability of telemedicine, in the context of healthcare services digitalization. A case study was performed, with cost-benefit, critical factors and organizational culture assessment. Finally, the Kingdom's framework helped to understand the implementation and scale-up process and the role of policy-making.

Results: With the total of 32,685 out-patient teleconsultations, growing steadily from 1998 to 2016, the Pediatric Telecardiology Service has reached national and international recognition, being a pioneer and an active promotor of telemedicine. This telemedicine service has saved significant resources, about 1.1 million euros for the health system (e.g. in administrative and logistic costs) and approximately 419 euros per patient (considering an average of 1777 patients per year).

Conclusion: The Pediatric Telecardiology Service enables real-time communication and the sharing of clinical information, overcoming many barriers (from geographical ones to shortage of healthcare professionals), improving access to specialized care both in Portugal and Africa.

Abstract
Background:
The COVID-19 pandemic is straining health systems and disrupting the delivery of health services, in particular, for older adults and people with chronic conditions, who are particularly vulnerable.

FACTORS CONTRIBUTING TO COVID-19 VACCINATION SUCCESS

- Large experience and large vaccination covering
- Excellent Population Response
 - Vaccination is well accepted in Portugal/historic reasons/1965
- The role of the NHS/Public Primary care Network Covering the whole country/Physicians and Nurses Resilience
- Strong epidemiologic vigilance mechanisms
- DGS/MoH technical Decision-Making
- Roll-out of vaccination by the Task Force

ENGAGING THE MILITAIRES (e.g. RESILIENCE)

- Admiral Henrique Melo Coordinator/ Ministry of Defense/General Staff of Armed Forces
- Full dedication and collaboration to roll-out the vaccination task force
- Precise and clear communication with the population and the staff
 - Regular visits to sites
- Multidisciplinary team
- Good Information System
- Negotiation and Logistics

- **Ukraine**

CRISIS PREPAREDNESS AND RESPONSE IS A COMPLEX PROCESS – IT REQUIRES SKILLED PROFESSIONALS

**INFORMATION
MANAGEMENT
IS ANOTHER
CRITICAL ISSUE
TO ESTABLISH A
MORE SUSTAINABLE
AND
RESILIENT
HEALTH SYSTEM**

Summary

- Health systems's strategy and planning should include Resilience
- Its about PEOPLE and ORGANIZATION
- Key factors: Primary care, Lessons learned and Human resources training;
- Digital health tools and infrastructure improve resilience;
- More importantly, resilience depends on good partnerships that enable sharing of experience and resources (within the SDGs framework)
